EXPERIMENT NO: 3

EXPERIMENTATION ON SIMULATION TOOL: CISCO PACKET TRACER

AIM

To simulate a simple switched network using Cisco Packet Tracer and verify connectivity between PCs.

PROCEDURE

1. Open Cisco Packet Tracer and create a new project.
2. Place 4 PCs and 1 switch in the workspace.
3. Connect each PC to the switch using a straight-through cable.
4. Assign IP addresses to each PC in the same subnet.
5. Use the Add Simple PDU tool to send a test packet from one PC to another.
6. Switch to Simulation Mode to observe the packet travelling through the switch.

IP ADDRESSING

Device	IP Address	Subnet Mask
PC0	192.168.10.1	255.255.255.0
PC1	192.168.10.2	255.255.255.0
PC2	192.168.10.3	255.255.255.0
PC3	192.168.10.4	255.255.255.0

OUTPUT

The PDU status between PC0 and PC2 was shown as Successful, and the Simulation Mode displayed the packet moving from PC0 to the switch and then to PC2.

RESULT

The network was simulated successfully in Cisco Packet Tracer and connectivity between the PCs was verified.
