EXPERIMENT NO: 8

OS NMAP LIVE HOST DISCOVERY

AIM

To discover live hosts in a network using Nmap.

PROCEDURE

1. Find the target subnet.
2. Run Nmap with the -sn option to perform host discovery without a port scan.
3. Try different scan types: ARP, ICMP and TCP SYN.
4. Note the live hosts shown in the output.

COMMANDS AND OUTPUT

```
$ nmap -sn 192.168.1.0/24
Starting Nmap 7.94
Nmap scan report for 192.168.1.1
Host is up (0.0010s latency).
Nmap scan report for 192.168.1.14
Host is up.
Nmap done: 256 IP addresses (2 hosts up) scanned in 2.31 seconds
```

RESULT

Live hosts in the network were successfully discovered using Nmap.
